

# PATIENT ELIGIBILITY CRITERIA

## ENDOMETRIOSIS: [<sup>18</sup>F]FAPI-74 PET-MRI

---

### SAMPLE SIZE:

5 premenopausal women aged 18-45 years, presenting with moderate-to-severe chronic pelvic pain, clinically suggestive of endometriosis, but without a confirmed diagnosis; and are scheduled for laparoscopy or laparotomy.

---

### ELIGIBLE PARTICIPANTS MUST MEET ALL INCLUSION CRITERIA:

1. Female aged 18-45 years.
2. Premenopausal.
3. Presenting with moderate-to-severe chronic pelvic pain, clinically suggestive of endometriosis, but without a confirmed diagnosis.
4. Scheduled for laparoscopy or laparotomy for endometriosis.
5. A urine pregnancy test will be required and must result as negative prior to administration of radiolabeled [<sup>18</sup>F]FAPI-74.
6. Free of magnetic resonance imaging (MRI) contraindications.

---

### PERSONS MEETING ANY EXCLUSION CRITERIA ARE INELIGIBLE FOR PARTICIPATION:

1. Need for emergent surgery that would be delayed by study participation.
2. Presence of serious co-morbidities and/or serious nonmalignant disease that may compromise participant safety.
3. Breastfeeding.  
*Nursing parents are allowed if the interested participant commits to pumping breast milk and discarding it from injection to ≥ 24 hours from the time of the [<sup>18</sup>F]FAPI-74 injection.*
